

Packaging solutions.

Carrier tapes ■ Contract carrier tape packaging ■

Carrier tapes.

We offer **carrier tapes measuring 16 to 200 mm according to the EIA standard**. SMD carrier tapes are manufactured with a **high level of accuracy**. The conductive carrier tapes provide superior protection for your SMDs and other components.

The technology employed offers accurate production of **almost any shape** and a maximum **depth of 19 mm**. The material thickness depends on the tape width, the cavity depth and the special requirements for transport and use in your production facility.

The carrier tapes comply with international standards or the specific requirements of our customers, permit **high-precision feeding** to automated production systems and are exactly positioned for assembly.

Contract carrier tape packaging.

Safe packaging of your components represents a separate area of service. We offer custom packaging solutions from **small series** through to **fully automated large series**.

We are **your single source** for carrier tapes equipped with your components. Expert consultation throughout the production process is a matter of course to us.

New: Optical parts checking before packaging

Fully automatic equipping with parts checking

Manual equipping for custom solutions

Reels and cover tapes.

The **plastic spools in various widths** are easy to fit and remove. The non-mounted spool can result in a space saving of up to 70%.

Antistatic, **easily removable cover tape** (for SMDs) based on polyester film. It readily adheres to PS, PET and PC when processed using the hot sealing or cold sealing method.

Workpiece carriers.

Plastic workpiece carriers can be produced in nearly **any shape**. Workpiece carriers can not only transport products, they can also store them and provide them for further processing just in time. They are highly suitable for **automated production processes** and are usable in diverse production stages.

All versions are, of course, stackable and nestable. We can offer all important and **innovative production processes**. We guarantee **maximum accuracy of fit and precision** - combined - without losing sight of the cost factor. After all, your benefit should be affordable.

Our quality.

A QA system - now in accordance with DIN ISO 9001:2008 - has been successfully employed at our company **since 2002.**

Advantage for you.

- Our know-how saves you time and money.
- You optimise your packaging and manufacture especially economically.
- You receive perfect service.
- You profit from our speed in realising projects.
- Your supplier also performs assembly for you.

Put us to the test.
